

# Complete Voice Solutions

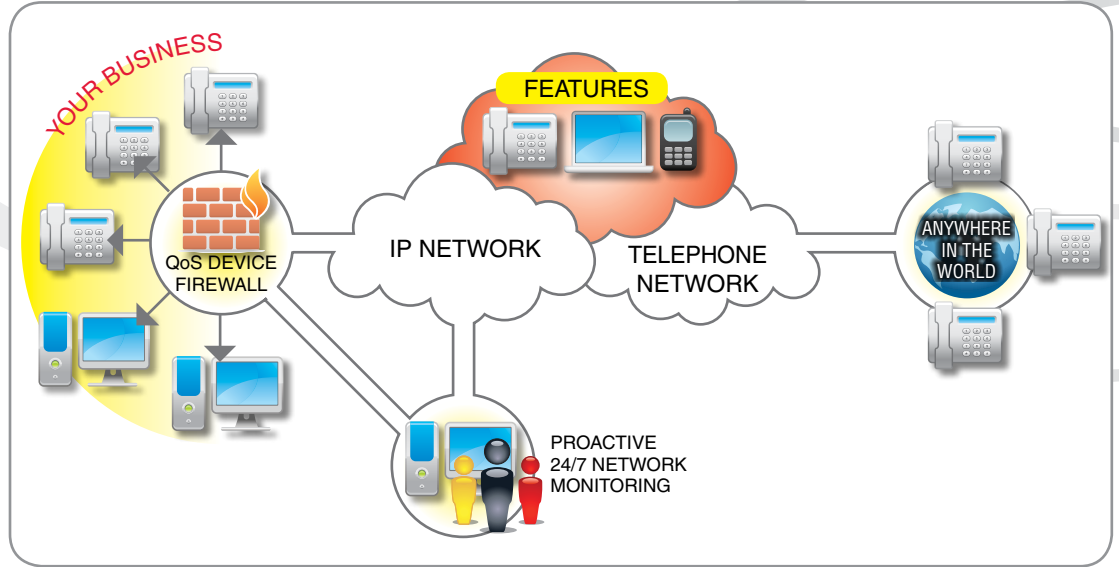

## GLOBAL SIP/VOIP NETWORK

Increased Productivity and Performance at a Lower Overall Cost

### SERVICE OVERVIEW

**Session Initiated Protocol (SIP) Trunking** is for enterprises wanting to make full use of their installed IP-PBXs and not only communicate over IP within the enterprise, but also outside the enterprise via a SIP trunk provided by WCS. WCS SIP Trunking is the ultimate VoIP product which gives your company the telecom power it needs to operate at peak efficiency while reducing your telecommunications expenses.

**Voice over Internet Protocol (VoIP)** technology enables data and voice communications to be routed over a single data network. VoIP technology uses this network to carry voice calls. A complete return on investment in less than 12 months can be achieved by dramatically reduced costs in PBX vendor moves, adds, changes. WCS' VoIP services are provisioned over the #1 carrier-grade VoIP platform in use today.

### SIP TRUNKING

Integrate your local, long distance and data traffic onto a single circuit, while seamlessly leveraging your existing in-house IP-PBX or Key system.

- Coverage In Contiguous US
- Full 911 And e911 Compliance
- Local Number Portability (LNP)
- Web-Based DID Management
- Free Local Calling

### HOSTED IP-PBX

Rid yourself of the frustration and cost of managing your own in-house phone system and equip your employees with powerful features.

- Business Class Features
- Risk free trial
- Cost Saving benefits
- Service Difference

## INTRODUCING THE FEATURES - SIP TRUNKING

### LONG DISTANCE SIP TRUNKING

WCS Long Distance SIP Trunking is the ultimate product for companies needing high volume long distance service. Installation intervals are much faster than traditional PSTN telecom facilities, so you get service quickly.

- Nationwide DIDs available
- Flexibility of having local DIDs in multiple locations around the country which ring you locally.
- Obtain local numbers for remote users
- International DIDs available in key locations around the world

- e911/411 included
- Managed router available
- Separate on-premise PSTN and data circuits no longer required

### LOCAL SIP TRUNKING

Traditional PRI's require you to purchase 23 lines at a time and can take over a month to install, resulting in buying more lines than you need and waiting too long to get them. SIP Trunks are fast. You'll buy only what you need.

- Easier to maintain diverse and redundant IP-based connections to ensure superior reliability and security
- No longer need to buy or maintain multiple PSTN connections and dedicated PSTN interface hardware

## INTRODUCING THE FEATURES - VoIP
